To whom it may concern

**Neo Infrastructure (AUST) Pty. Ltd. Reference - Belair Drainage Works**

Neo were recently engaged by AECOM on behalf of our client to complete a drainage upgrade involving remediation works to existing roads, footpaths and underground drainage, as well as installation of new infrastructure. The site was located within the Belair National Park, located within the Mount Lofty Ranges, South-East of Adelaide, and the works were scheduled for construction during the winter months of May and June to coincide with lower visitation by park users.

Challenges included:

- Regular rainfall events
- Maintaining continual access throughout the park for visitors and park staff
- Strict environmental requirements
- Discovery of unknown services
- Short deadlines

Neo approached the project with an attitude of professionalism and repeatedly added value by presenting constructive solutions when confronted with difficult circumstances. Despite repeated delays and damage to the works from heavy rainfall events, Neo worked collaboratively with the client and myself to ensure key project milestones were met on time, and successfully completed the works on schedule.

Neo's commitment to ensure the intent of the project was delivered coupled with their honest and timely communication paved the way for efficient project delivery and successfully catered for the objectives of all stakeholders concerned.

Based upon this experience I would happily recommend NEO to any potential client.

Yours sincerely

Julian Strudwick
